Chlorine/Chloramine Removal System

“A difference you can taste and smell”

Both chlorine and chloramine are effectively used as a disinfectant in public water supplies to provide disease-free tap water to your home. While this is a positive to the reduction of water borne diseases, there is also a negative.

The use of chlorine or chloramine leaves residual amounts that are absorbed through the pores of your skin; drying out your skin and hair. It is also inhaled as chlorinated vapors from the steam; increasing risk of asthma, bronchitis and cancer. The **elements chlorine/chloramine removal systems** safely and effectively remove these elements from your water; a difference you can taste and smell.

Benefits of a Chlorine/Chloramine System

- Chlorine/chloramine free water for cooking and drinking gives you better tasting food, coffee and tea.
- Chlorine/chloramine free water for bathing leaves you with softer skin and smoother hair after every shower or bath.
- Bottled quality water at every faucet.
- Safeguards your homes water from chemicals, organic and inorganic compounds.
- A great polisher to compliment your softening or descaling system.

Chlorine/Chloramine Removal System

The ***elements chlorine/chloramine removal systems*** are highly effective whole house filtering systems designed to provide cleaner, safer water throughout your entire home. To determine which system you need, contact your municipality to verify whether they use chlorine or chloramines to treat the city water in your area. If you have a private well, have your water tested by a certified water specialist.

How they Work:

The ***elements chlorine removal system*** is a POE (point of entry) system. The supply water enters the media tank where it flows through steam cleaned, coconut-based activated carbon media that traps the chlorine, thereby removing it from the water. Giving you chlorine free water throughout your entire home.

The ***elements chloramine removal system*** is a POE (point of entry) system. The supply water enters the media tank where it flows through steam cleaned, coconut-based catalytic carbon media that traps the chlorine, chloramine, organic and inorganic compounds thereby removing them from the water. Giving you clean fresh water throughout your entire home.

- Removes chlorine, chloramine, pesticides and heavy metals from your water.
- Media is made in the USA.
- NSF/ANSI Standard 61 tested and approved activated or catalytic coconut carbon filter media used in each system.
- Increases life of water softener media.

The ***elements chlorine/chloramine removal system*** is available in various configurations. Our highly qualified Hankscraft ***elements*** dealers will be happy to recommend the correct system that fits your needs.

We are committed to providing you with the best solution to your water quality problems. Contact us today to get the quality water you and your family deserve.
