

## ***Iron Series – RevV4*** ***Iron Removal System***

***“Pure clean, pure filtered, pure water”***

You care about your home and the quality of your water for your family and so do we. Having iron, hydrogen sulfide and manganese in your water pose a problem for your water quality. With these elements in your water you will be experiencing several problems. Some of those problems include discolored laundry, a rotten egg odor, foul taste, rust colored stains in your toilet, sink, shower, and faucets; and clogging or corroding fixtures, appliances, and plumbing. Removing these elements will make a difference you can see, smell, and taste throughout your home.

You have an iron problem, we have the solution...  
an ***elements iron system***.

- Clean and odor free water throughout your home
- Whiter and brighter laundry
- Environmentally friendly – no salt used
- Eliminate rust stains from forming in your toilets, sinks, faucets, and showers
- Prevent iron build-up in water heaters, dishwashers, pressure tanks and plumbing
- Increase efficiency and life of water consuming appliances
- Save time and money on cleaning and supplies

Water is an essential element of life;  
we work to make it the water you deserve...  
clean and pure.

## ***Iron Series – RevV4*** ***Iron Removal System***

The **elements iron series** is a highly effective, meter monitored, twin tank system designed to deliver air on demand from our whisper quiet air pump. This ensures a constant supply of oxygen and sufficient contact time to remove iron, sulfur, and manganese from your water.

### ***How it works:***

The water first enters the aeration tank where the dissolved iron, manganese, and sulfur makes contact with the oxygen and converts (oxidizes) into particles. The water then travels to the filter tank where those particles are caught and held by the filter media; giving you iron free water flowing throughout your home. The system regenerates, at the programmed time, to wash the media free of the iron that has been held in the media and sends it to the drain. No salt is required for this process.

- Chemical-free iron, sulfur and manganese removal
- Whisper quiet air pump
- Advanced meter monitoring system for maximum efficiency
- Safe and efficient 12-VDC power-uses less electricity
- Corrosion resistant valve and components
- Auxiliary output options to handle extreme problem water

The **elements iron series** is available in various configurations and capabilities. Our highly qualified Hanksraft **elements** dealers will be happy to recommend the correct system that fits your needs.

We are committed to providing you with the best solution to your water quality problems. Contact us today to get the quality water you and your family deserve.
